Study-Assistant

The Study Assistant is a python bot that helps students studying by fetching online any relevant article or videos and formatting them as audio content for easy consumption.

By default the assistant uses duckduckgo as search engine (abbreviated as ddg).

By default the assistant will only click on the relevant links provided on the first search engine result page (abbreviated as SERP)

The assistant has built in scrapping support for5 websites. Other scraping templates maybe added further on or better templates for the existing ressources may be added. In the code the templates are if statements. The article will be found and stored in function of the website the bot is on.
